# CHAPTER 1

# INTRODUCTION

- ➢ BACKGROUND OF THE PROJECT
- ➢ OBJECTIVE OF THE PROJECT
- ➢ SCOPE OF THE PROJECT

# Background of the organization:

Independent University, Bangladesh (IUB) is one of the leading and oldest private university in Bangladesh where academic excellence is a tradition, teaching a passion and lifelong learning a habit. It was established in 1993. It has an explicit focus on Research and Global partnerships. The IUB campus sprawling over 3 acres, has an amphitheater, the state-of-the-art laboratories, well-equipped library with online access to journals and books, above 70 classrooms, lecture galleries, auditorium, gymnasium, food court, playground, medical Center, counseling Center and an alumni office.

IUB has world-class undergraduate and graduate program accredited by professional national 7 international accreditation bodies, such as University Grants Commission of Bangladesh (UGC), Accreditation Council for Business Schools and Programs (ACBSP), USA, and Institution of Engineers, Bangladesh (IEB). IUB prepares graduates for a successful career and this is central to the design of courses and the support we provide. The programs and the courses are designed in such a way that prepare the students for a successful career. The faculty members of IUB are actively engaged in research and publish regularly in peer-reviewed journals. Along with conventional classroom based teaching, students are engaged in research relatively early in their studies. IUB has academic research collaborations with various universities including Harvard University, Stanford University, University of Colorado at Boulder, Brown University, McMaster University, University of Heidelberg. IUB also participate in various national level inter-university sports, robotics, debates and similar competitions.

# Background of the project:

The Student Performance Monitoring System focuses on performance monitoring of student's continuous assessment (tests) and examination scores in order to predict their final achievement status upon graduation.

The main theme of this project is to find the systemic problems and limitation we have in our current system in few areas and how can we improve it. The aim of our project is to design, build and deliver a developed software that we believe will help universities everywhere to promote a more productive and effective way of evaluating students. Also there need to be some functional changes in the system and department. We also analyze individual processes that take place under the current system of monitoring student performance and the concerns and problems with those process from start to finish.

## Objective of the project:

We want to develop the existing software iras in such way that can be more user friendly and helpful .it will help the institution to improve the quality of education. where the students and the faculty can use the system and find information more easily .in a short passage of time they can find all the information related to student enrollment, student grades, students CGPA and also CO and PLO.it will also benefit all the departments of the institution. this development will boost the work rate of everyone. it will be more productive and effective. not only the iras but also in different aspect few things need to be changed where we worked on. Monitoring semester wise student performance report by an Instructor and also analyze how to Department head submit grades of the students instead of faculty.

## Scope of the project:

Project scope is a prerequisite to guarantee the success of a project. We have to make sure that the new system can be more successful than the present one when we are modifying an existing system.

We build an interface for faculties to able to see grades of another courses of a Student. Department can also access the systems for uploading grades instead of Instructor. If for some reason the instructor cannot upload the grade, then the Department can do it. On the other hand, Department head will be able to view different activities according to the different courses and sections of the instructor like Instructor's Attendance,
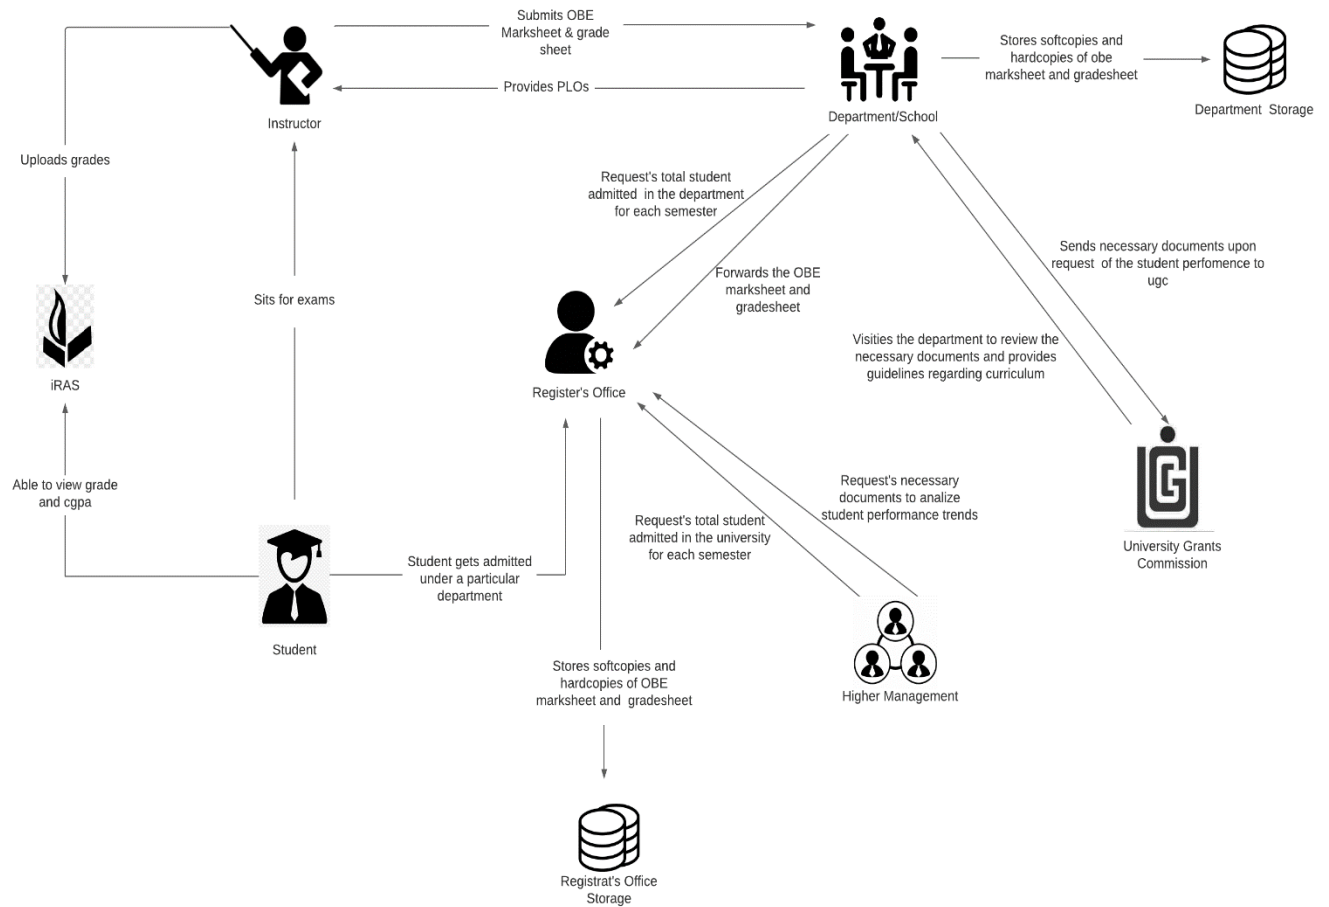

Course wise Student performance etc.

Data will also, be protected and each user will be shown only that data which is relevant to them.

# Problem Analysis

| Process Name | Stakeholders | Concern (Problems) | Analysis (reason of the problem) | Proposed Solutions |
|---|---|---|---|---|
| Preparing a Course Assessment | 1.Instructor 2.Student | Sending hardcopy And softcopy Students examination marks And course Assessment report to the register office store the info Time consumption And delay is prime limitation. Even after storing data in the register office store, if there is any need to see the information of any student or any course performance or a particular section of high management then It is very difficult to find these. | In our existing system higher management store assessment data manually As sending hardcopy and softcopy to the register office involve multiple persons and different processes, it could easily led to confusion, loss of important student report card. It also wastes unnecessary resources such as paper and printer. | We will create a system where Higher management will no longer have to wait for the registered office for searching particular student data. If higher management wants to find student data, specific course data, or find specific section-wise student data they can enter only student ID, Course ID, or Section ID in our new system. They will be able to see student performances in the graph shows. And they can download student information. |
| | | In our existing system higher management can't see their instructor | In our exacting system higher management can only see | We will create a new system where Higher Management can see their |

| Higher Management Viewing Individual Instructor Performance | 1.Department Head<br>2.Dean<br>3.Instructor | performance digitally. Higher management see only Instructor performance send by the hardcopy of the course wise student performance report. Higher Management can't see how many quizzes and assignment they are taken, whether he is taking regular classes, whether he is giving exam papers properly, what is the result of the student in his section, what was the result of the last semester even under that faculty and what kind of project they are maintains for specific course and prepare a projects specification based on their course | Hardcopy for an individual instructor performance, but it's difficult for measuring a performance instructor by instructor, and it's also difficult comparing with previous semester performance because its hardworking and time consumption matter. It also wastes unnecessary resources such as paper and printer. | Instructor Performance department wise, section wise, and course wise. Higher Management can download instructor performance data with graphs or charts. Then they can easily compare to each other and also compare with previous semester result in the same course. After download data Higher Management can see their performance like how many quizzes and assignment they are taking, whether instructor attend the class regularly, also see instructor class performance and class performance feedback by the student after faculty evaluation |
|---|---|---|---|---|

| Instructor viewing the CGPA and change the grade | 1.Instructor<br><br>2.Student | In our existing system without the Higher Management, the faculty cannot see any student's CGPA and grade sheet. They only know about the courses they have taken. Even once they upload the grade to the system, they cannot change it later. If a student's grade changes or applies for a change, the instructor has to help the Register Office and Department Head. And it takes the permission of the obsessed department head to change the grade | Now, instructor can't see any student CGPA and grade sheet and also If a student feels that his or her grade has not been returned or correct, the student will apply along with the instructor. After Application Instructor Contact Department Head Than They Can Check the Script Again. If change is another grade then department head request to Register Office for Change The Grade, It's a Long Term and Hard Process Also its Time Consumption process. | We will create a new system where Higher Management and instructor can see the student CGPA and Grade sheet using student ID in this case instructors and students should be in the same department. And also we will create a system where higher management and instructor can change the grade easily getting application from student after checking script with department head and controller of examination. After. And instructor get permission to resubmits the grades easily using our new system. |

| | | | | |
|---|---|---|---|---|
| Higher management and Instructor viewing OBE mark sheet and grade sheet | 1.Higher management (HM) 2.Instructor 3.Department 4.Dean/Vc | The current process of requesting the head of the department to view records for analysis and inspection can result in delays due to various problems in communication. Since the OBE Marks sheets course assessment reports and other necessary documents are only saved in softcopies (Without database management) and hard copies, it can get tedious and time-consuming to retrieve them when needed. | Due to being a hardcopy, when the Higher management wants to see each course, section, and department wise OBE mark sheet and course assessment then a lot of trouble to maintain this kind of documents, and it is also very difficult to analyze by looking at the hard copy so that the data is likely to be wrong and lost and when these data are compared with any previous data it becomes more difficult. It also wastes unnecessary resources such as paper and printer. | We will create a new system where Higher Management and instructor can see the OBE Mark Sheet, Course Assessment using their ID (Only those to whom Higher management will give permission will be able to see) The system that we will build be there the mark sheet and course assessments will be according to the section, course, and department, and they can download them as needed. |
| | 1. Department | We don't have | If necessary, | We will create a |

| | 2. Instructor<br>3. Student | the option to grade someone else instead of the Instructor in our system. If for some reason an instructor cannot give a grade If there is an instructor leave or something tragic happens then there is no option to continue the semester and submit a grade, unless the department manages it. | if an instructor is on leave, then the whole matter has to be handled by the department Instead, another instructor has to be appointed and he has to explain the whole process again, it's difficult to manage in a short period of a semester. | new system where the Department Head can see the performance of the students and give them a grade for Emergency Situations. Based on their PLO & co achievement and OBE mark sheet in the Previous semester |
|---|---|---|---|---|
| Students will be able to get grades from Department instead of Instructor | | | | |
| Higher Management & Instructor Uploading & Viewing PLOs/CO | Higher Management (HM) Department | In our existing system Higher Management (HM), Department Head, Dean/VC and instructor see only hardcopy PLOs and Co achievement, but its time consuming when they want to check it manually. There are many students in one section and every course has many sections and each department has | The current system does not support Viewing PLOs and CO achievement. Due to which no one Instructor, Higher Management cannot see the POL & Co Achievement and student performance | We will create a new system where Where instructors can upload Plo & Co reports, all of the higher management and instructors can see and download the data. They will be able to view this data using input Student id to the system and see Plo & co achievement of any specific student, course-wise, and section-wise. |

|  |  |  |  |  |
|---|---|---|---|---|
|  |  | many students, so a lot of student information is not possible to check manually. In this case, there is a possibility to lose data. |  |  |
| Student viewing PLO & CO | 1.Student | In our existing system Student cannot see our PLOs and Co achievement. They cannot even see the hardcopy. | It is important for every student to see their Plo and co-Achievement, what course they are doing, it is important to know what did they achieved and what issues need to be improved. But it is not seen in our existing system now. | We will create a new system where Students will be able to see and download the file and they will be able to view their Plo & Co achievement and compare with the other Course. |
| UGC approves curriculum based on PLO and CO | 1. Higher Management (HM) 2. UGC | HM needs to send the curriculum booklet manually. HM needs to send the updated Curriculum to the Department every time. | It will take time for the UGC to receive the Curriculum booklet and process the information. It is a hassle to send manually every time the curriculum is updated | We can transfer the curriculum in our new system by which it could be accessed easily by the members and it also could be edited real time by the HM and updated instantly whenever |

| | | | | changes are required by the UGC. |
|---|---|---|---|---|

# BUSINESS RULE

1) A student may register under one or more programs. A program many have multiple students.

2) A department may have multiple programs. A program must be exactly under one department.

3) A school may have multiple departments. A department must be exactly under one school.

4) A department may have multiple instructors. An instructor must be exactly under one department.

5) A department must have exactly one head.

6) A school must have exactly one dean.

7) A program may have multiple PLOs. A PLO many be under multiple programs.

8) An instructor may teach multiple courses. A course must have exactly one instructor.

9) A course may have multiple sections. A section must be under exactly one course.

10) A student may tale multiple assessments. A particular assessment must be taken exactly by one student.

11) A section may have multiple assessments. An assessment must have one exact section.

## 3NF

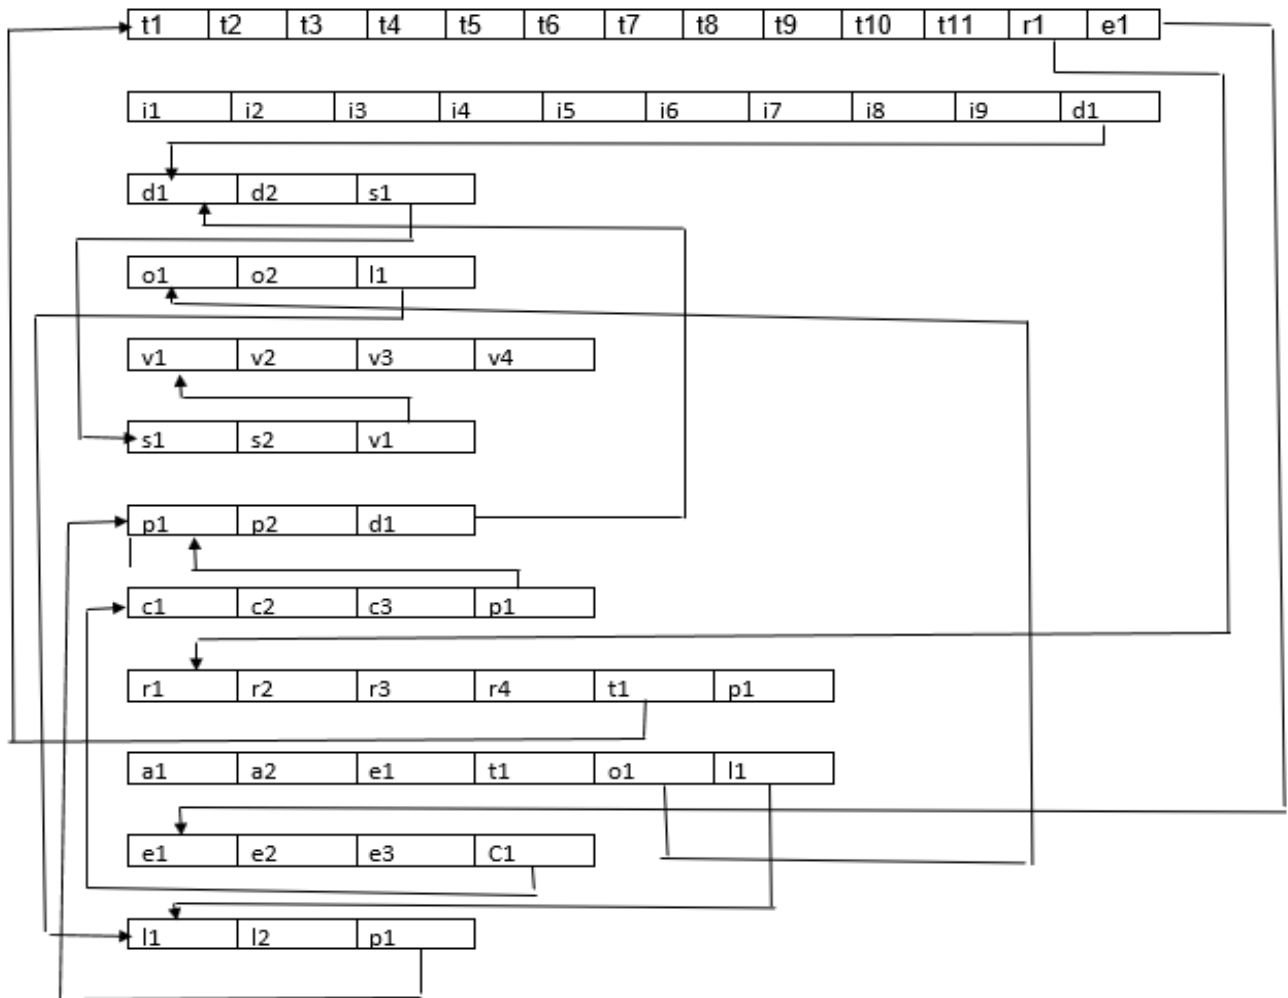

1NF: Arrange all the relationships such that there are no repeating groups.

2NF: Remove all the partial dependencies. Since there are no composite keys presents this step is not required.

3NF: Remove transitive dependencies.

## BCNF

No non-key attribute can identify can primary key or part key. Therefore, all relations are in BCNF

# DATA DICTIONARY

VC_T

| Name | DataType | Size | Remark |
|---|---|---|---|
| nvcid | Number | | **This is the Primary Key for VC.**<br>**Example: "19……"** |
| cname | Text | | **This is the name of vc**<br>**Example: "md khan"** |
| cqualification | Text | | **This contains the qualification of vc**<br>**Example " PHD , BSC"** |

School_T

| Name | DataType | Size | Remark |
|---|---|---|---|
| cschoolid | Text | 5 | **This is the Primary Key of School**<br>**Example: "SETS"** |
| Cschoolname | Text | | **This is the name of the School.**<br>**Example: "School of Engineering, Technology**<br>**and Science"** |

Department_T

| Name | DataType | Size | Remark |
|---|---|---|---|
| cdepartmentid | Text | 5 | **This is the Primary Key of the Department.**<br>**Example: "EEE"** |
| cdepartmentname | Text | | **This is the name of the Department.**<br>**Example: "Computer Science and Engineering"** |
| cschoolid | Text | | **This is the Foreign Key of the table School.**<br>**Example: "SETS"** |

Student_T

| Name | DataType | Size | Remark |
|---|---|---|---|
| nstudentid | Number | | **This is the Primary Key for the Student.**<br>**Example: "1800001"** |
| cname | Text | | **This is the name of the Student.**<br>**Example: "Muhammad Akib"** |
| cguardianname | Text | | **This is the name of the guardian.**<br>**Example: "Muhammad karim"** |
| caddress | Text | | **This is the address of the Student.**<br>**Example: "House 270, Road 6, Block C, Bashundhara, Dhaka, Bangladesh** |
| ddateofbirth | Datetime | "dd/mm/yy" | **This the Date of Birth of the Student.**<br>**Example: "01-01-2000"** |
| cgender | Text | | **This is the gender of the Student.**<br>**Example: "M** |
| ncontactno | Number | | **This is the phone number of the Student.**<br>**Example: "0191211141"** |
| cemail | Text | | **This is the email address of the Faculty.**<br>**Example: "mahady@iub.edu.bd"** |
| cnationality | Text | | **This contains nationality of the student**<br>**Example: "Bangladeshi"** |
| nenrollementid | Number | | **This is the Foreign Key from the enrollement table.**<br>**Example: "91....."** |
| nsectionid | Number | | **This is the Foreign Key from Program table**<br>**Example: "10......".** |

Instructor_T

| Name | DataType | Size | Remark |
|------|----------|------|--------|
| ninstructorID | Number | | **This is the Primary Key for Faculty. Example: "1501…. "** |
| cname | Text | | This is the first name of the instructor. Example : " Abdur Rahim" |
| caddress | Text | | **This is the address of the instructor. Example: "House 1, Road 1, Sector 1, Uttara, Dhaka, Bangladesh** |
| ddateofbirth | DateTime | **DD-MM-YYYY** | **This the Date of Birth of the** instructor. **Example: "01-01-1993"** |
| cgender | Text | | **This is the gender of the** instructor . **Example: "F"** |
| ncontactno | Number | | **This is the phone number of the** instructor**. Example: "01910101010"** |
| cemail | Text | | **This is the email address of the** instructor**. Example: "mahady@iub.edu.bd"** |
| cdepartmendid | Text | | **This is the Foreign Key from the Department table. Example: "CSE** |

Departmenthead_T

| Name | DataType | Size | Remark |
|------|----------|------|--------|
| cacademicqualification | Text | | **This contains the academic qualification of a department head Example " PHD , BSC"** |

| PLO    Name | DataType | Size | Remark |
|---|---|---|---|
| cploid | Text | 5 | **This is the primary key for Program Learning Outcome.** <br> **Example: "PLO1"** |
| cdetails | Text | | **This is the details of the Program Learning Outcome.** <br> **Example: "An ability to select and apply the knowledge, techniques, skills, and modern tools of the computer science and engineering discipline"** |

Dean_T

| Name | DataType | Size | Remark |
|---|---|---|---|
| cannualsalary | Text | | **This contains the annual salary of a dean** <br><br> Example : "100000 taka " |

| | | | |
|---|---|---|---|
| cporgramid | Text | | **This is the foreign key from Program table** <br> **Example: ”B.Sc”.** |

Enrollement_T

| Name | DataType | Size | Remark |
|---|---|---|---|
| nenrollmentid | Number | | **This is the Primary Key for Enrollment** |
| dyear | Datetime | | **This is the year of Enrollment** <br> **Example: "2017"** |
| csemester | Text | | **This is the semester of Enrollment** <br> **Example: "Autumn"** |
| cenrollmentdate | DateTime | **DD-MM-YYYY** | This contains the date of the enrollment. <br> Example : 30/01/2021 |
| nstudentid | Number | | **This is the Foreign key from the Student Table.** <br> **Example: "1800001"** |

Course_T

| Name | DataType | Size | Remark |
|---|---|---|---|
| ncourseid | Text | | **This is the Primary Key for the Course.** <br> **Example: "CSE203"** |
| ccoursetitle | Text | | **This is the name of the Course.** <br> **Example: ”Data Structure”** |
| ccoursetype | Text | | **This is the type of the Course.** <br> **Example: "Core"** |
| cprogramid | Text | | **This is the Foreign Key from Program table** <br> **Example: ”B.Sc”.** |

Section_T

| Name | DataType | Size | Remark |
|---|---|---|---|
| nsectionid | Number | | **This is the Primary Key for Section** Example :"1001" |
| Nsectionno | Number | | **This is the section number.** **Example: "4"** |
| croomno | Number | | This is the room number . Example : "B7107" |
| ccourseid | Text | | **This is the foreign key from the Course table.** **Example: "CSE203"** |

Program_T

| Name | DataType | Size | Remark |
|---|---|---|---|
| cprogramid | Number | | **This is the Primary Key for program.** **Example : "BSC"** |
| cprogramname | Text | | This is the name of the program . Example : "Bachelor of Science" |
| cdepartmentid | Text | | **This is the Foreign Key from the Department table.** **Example: "CSE"** |

Assesment_T

| Name | DataType | Size | Remark |
|---|---|---|---|
| nassesmentno | Number | | **This is the Primary Key for assessment .** Example : "1" |

| Name | DataType | Size | Remark |
|---|---|---|---|
| cassesmenttype | Text | | This is the type of assessment . Example : "Assignment ,Viva" |
| nsectionid | Number | | This is the foreign key from section table Example" 1001" |
| nstudentid | Number | | This is the foreign key from student table Example : "1810000" |
| ccoid | Text | | **This is the foreign key from the Program Learning Outcome table. Example: "CO1"** |
| cploid | Text | | **This is the foreign key from the Program Learning Outcome table. Example: "PLO1"** |

CO_T

| Name | DataType | Size | Remark |
|---|---|---|---|
| ccoid | Text | 5 | **This is the Primary Key for Course Outcome. Example: "CO1"** |
| ccoursename | Text | | **This is the name of the course Example: "Database management system"** |
| cploid | Text | | **This is the foreign key from the Program Learning Outcome table. Example: "PLO1"** |
